# DESIGN

## DISC PACK COUPLINGS

Taking into account the friction drive principle of the R+W disc coupling design, torque is transferred without micro-movements or backlash.

### MISALIGNMENT COMPENSATION

$$\Delta K_{total} = \Delta K_r + \Delta K_w + \Delta K_a \leq 100\%$$

The maximum total misalignment of the disc coupling should not exceed 100% of the combined percentages of the maximum axial, angular and lateral values as shown in the product data tables.

#### Example: pump skid

- axial misalignment: 20%
- lateral misalignment: 40%
- angular misalignment: 40%

$$\Delta K_{total} = 20\% + 40\% + 40\% \leq 100\%$$

☑ coupling is fatigue resistant
